

OVERTIME BED RAILS

Tough aluminum bed rails clamp to your truck rails providing the great protection and versatile mounting points to secure cargo and accessories.

>>Mount Accessories

Each rail side is pre-drilled with 3/8" holes to accept Overtime truck accessories, or you can easily drill additional holes to mount almost anything. Ask your dealer about accessory options available.

>>Tough protection

Constructed from heavy duty, corrosion resistant 3/16" thick 6061 aluminum with a textured black powder coated finish, these durable bed rails are designed to withstand the punishing abuse truck owners dish out.

>>No Drill Installation

Compression clamps secure the rails the whole length of the truck sides. This solid clamping eliminates the corrosion and "tear out" problems associated with bolted down and stake pocket mounted bed rails.

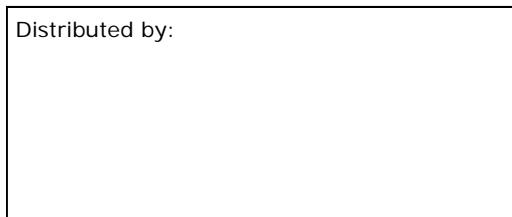

>>Innovative design

The front and rear of each bedrail are notched to fit over the bed front and rear bed post, respectively. This design helps to distribute the weight of equipment, to the ends of the bed minimizing "side crushing."

96", 78", and 74" lengths available to fit most full-size pickups.
